

ITT Global Presentation

The best in Europe in its capacity

The best in Europe in its capacity

ITT Global is one of the biggest investments of ITT Logistics whose foundations were laid in the second half of 2018 and which was brought into action within a period shorter than one year. The facility which was founded on 7.500 m² land in Kocaeli Dilovası 4th organized Industrial Zone, has an indoor area of 1.500 m².

ITT Global which is unique in capacity and biggest facility of Europe, offers the services of chemical, food, IBC tank container washing, full/empty storage services at once.

It has the characteristic of being a giant investment established with an equity capital of TRY 30 million which is as big as being able to fast pinpoint its place in the sector with its capacity and technological hardware.

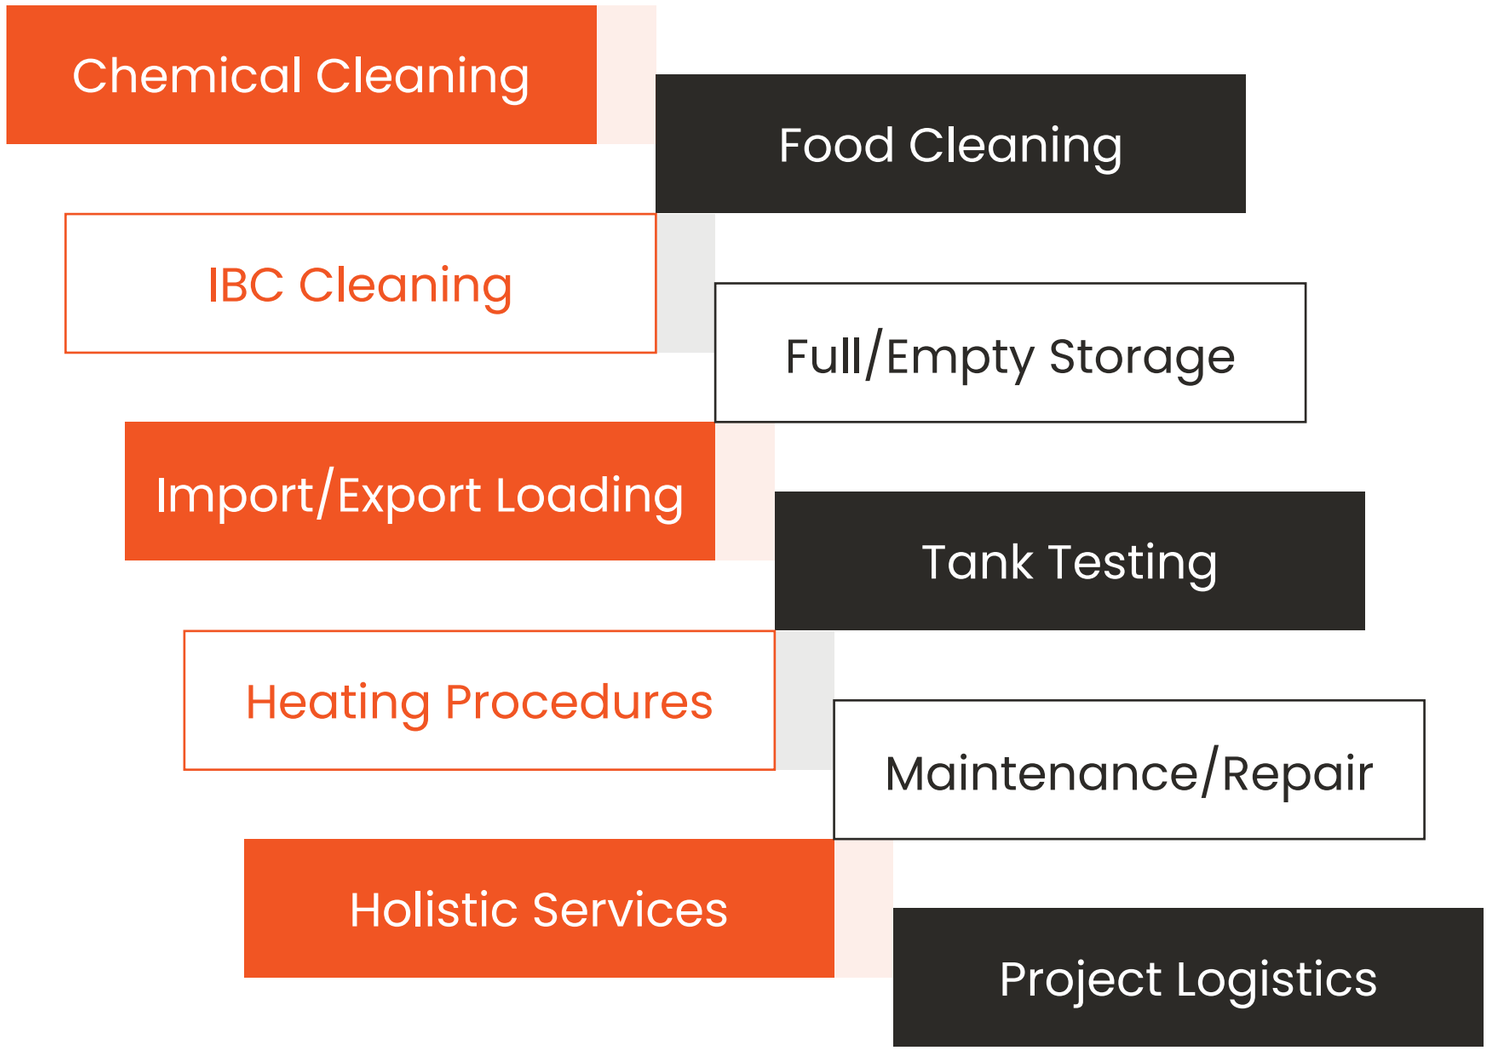

There are 4 chemical tank and tanker washing stations, 1 washing station dedicated to food washing only and 8 IBC washing units and these can offer service simultaneously.

Taking its service capacity, investment size and privileged features in consideration, ITT Global will substantially fill in the sector and take firm steps towards being a brand in demand.

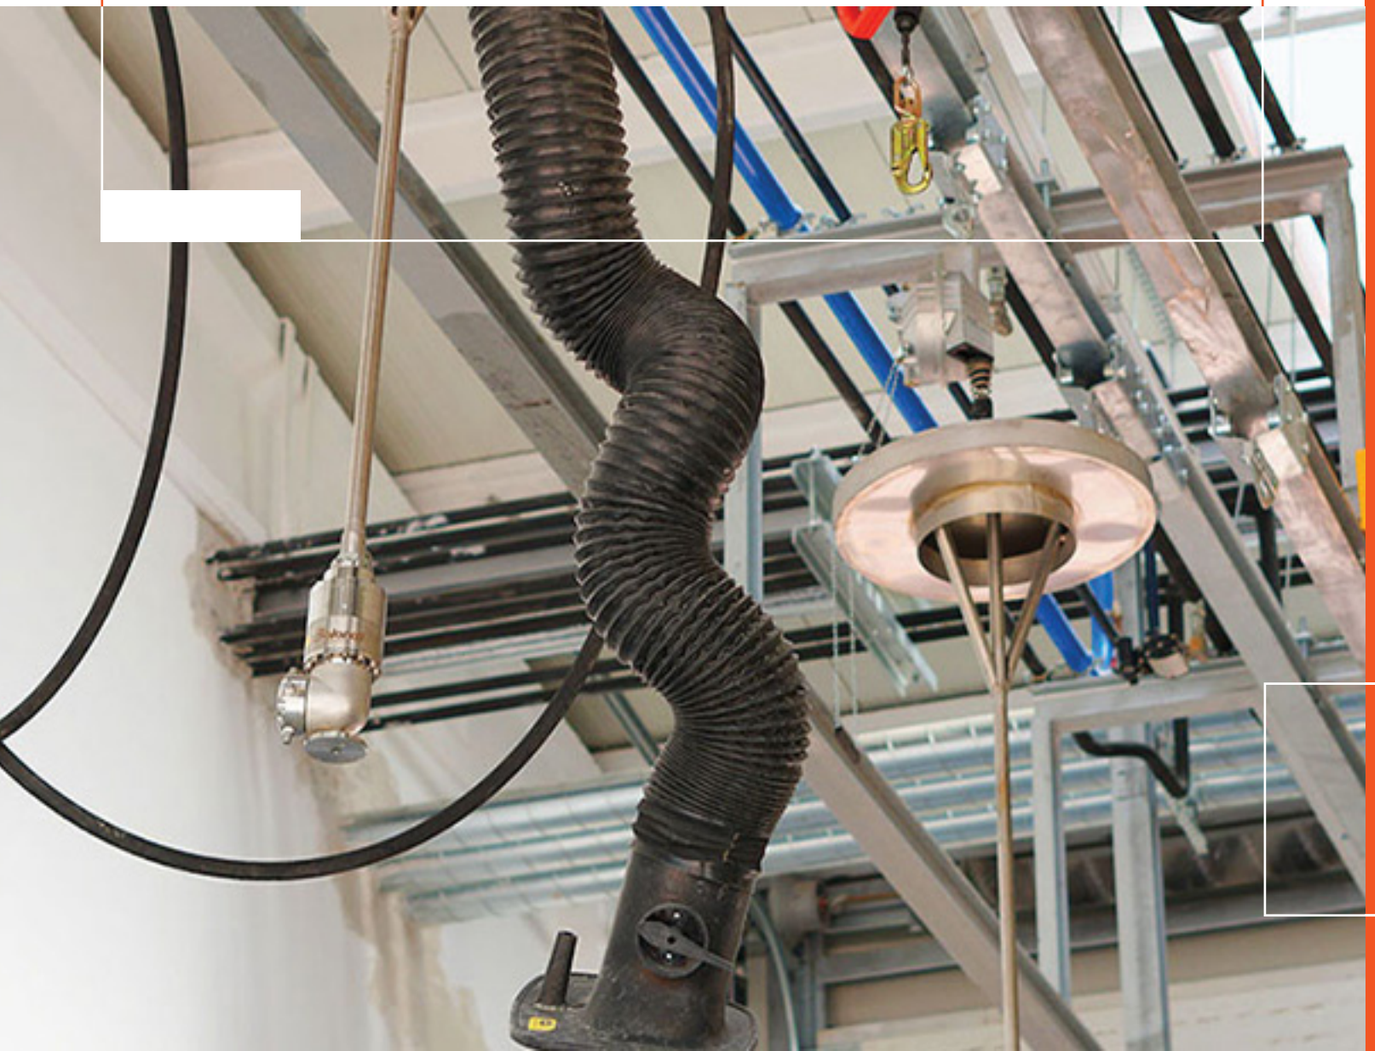

Our Services

Chemical Cleaning
Food Cleaning
IBC Cleaning
Full/Empty Storage
Import/Export Loading
Tank Testing
Heating Procedures
Maintenance/Repair
Holistic Services
Project Logistics

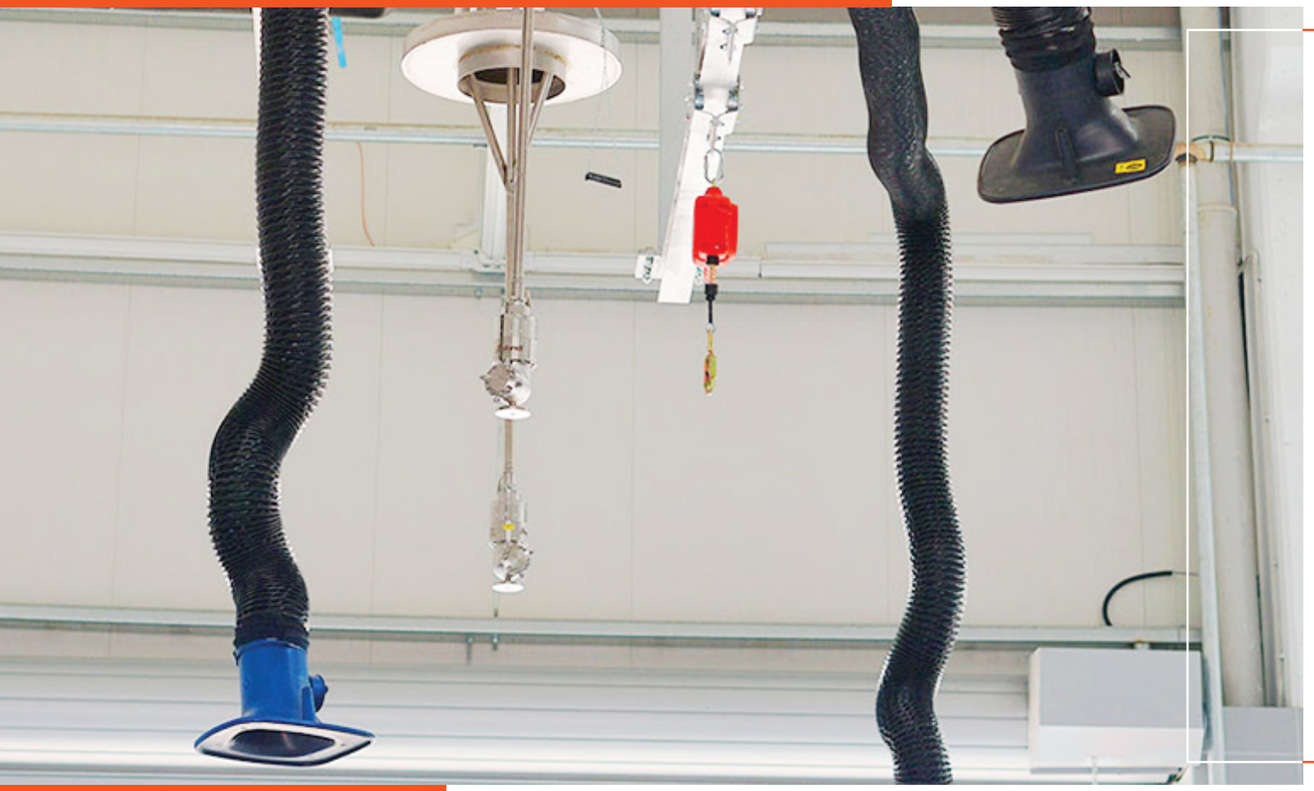

Chemical Cleaning

ITT Global conducts the washing procedures for tank container which transport chemical substances such as mineral oils and additives, chemicals used in the paint industry, oil acids, raw materials and chemicals used in the cleaning industry, construction chemicals, binders and resins, latexes, monomers and acrylate at once by using full automation system with its 4 chemical tanks and tank washing stations. On the contrary to several facilities which makes biological purification, ITT Global designs the waste pool, in other words balancing pool, underground and thus, ensures maximum protection with crystal and injection system against any leakage which may damage the environment. Moreover, it takes the environment under preservation with zero damage by making +CTP coating.

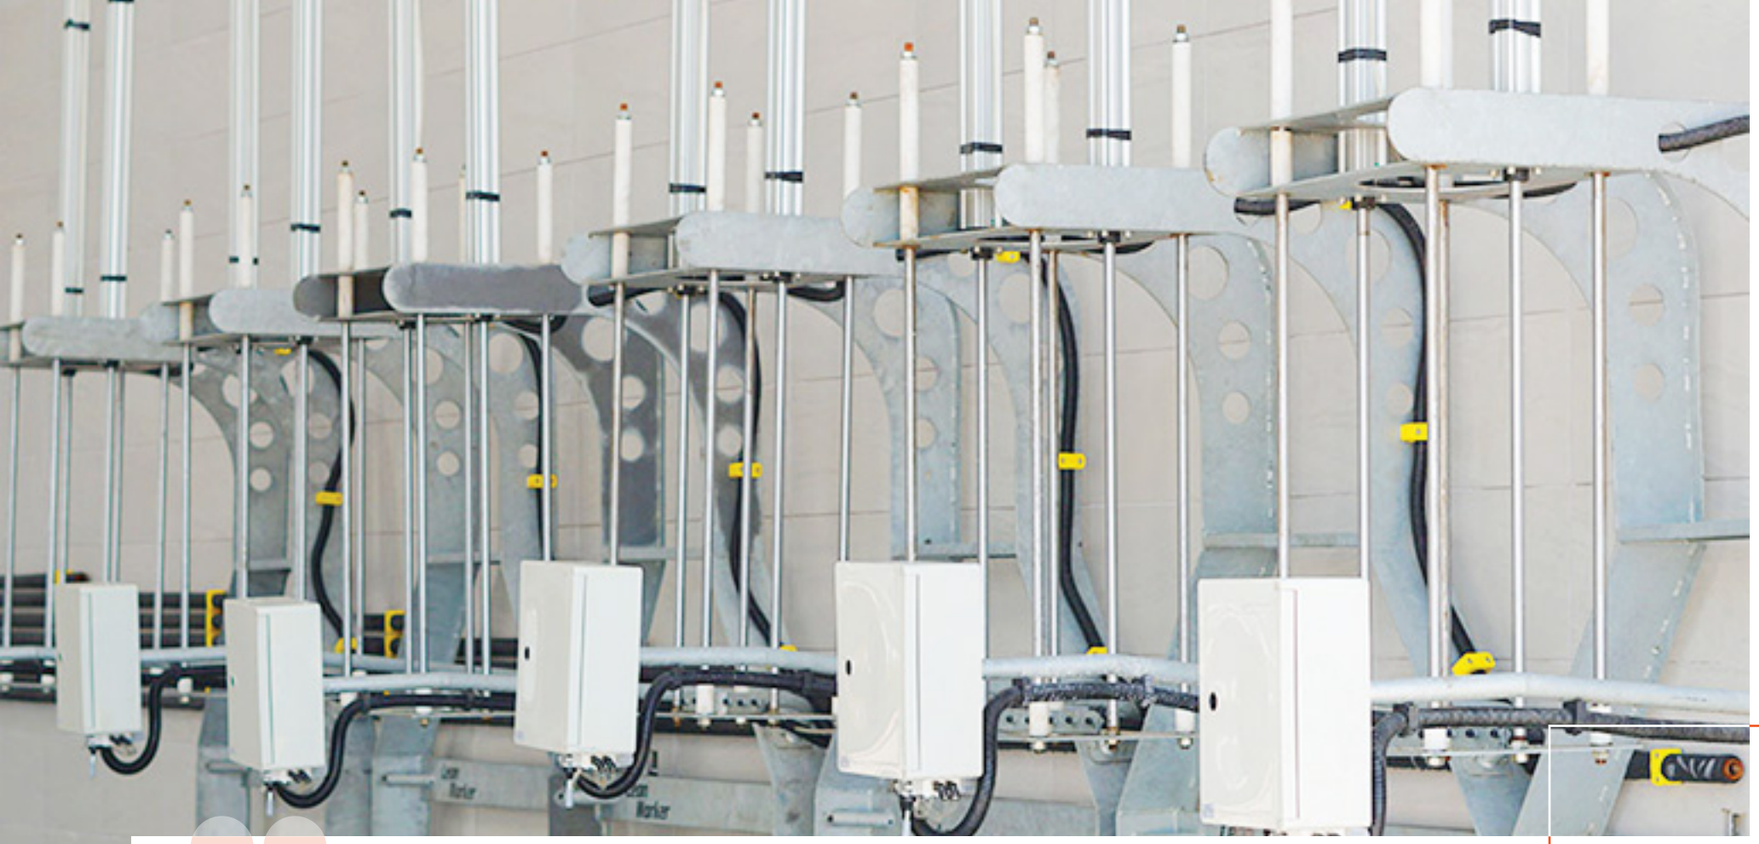

All services offered with a holistic understanding of logistics services are managed with smart technology highly sensitive to environment and human health and in conformity with norms of Ministry of Environment and European environmental norms.

Food Cleaning

The tank container cleaning and sterilization is very important and necessary in the food logistics. ITT Global only makes washing under high hygiene conditions untouched by human hand with fully automated washing station specially constructed for food washing and thus, it meets the requests and expectations of food industry at maximum level.

ITT Global displays a pioneer approach with ultraviolet sterilization system of water and reducing the hardness of water to 0, in other words its softening system specification which is a very important aspect in the food washing.

IBC Cleaning

The IBC (Intermediate Bulk Container) is a general term given to containers used for storing and transporting the fluid and rigid substances. The production mode and raw materials of an IBC depends on the use.

ITT Global offers washing cleaning service for IBC tank having all kinds of specifications and thus, substantially reduces the costs of companies by adding value to renewed IBC. Thanks to its environmental washing conditions in compliance with international standards, it adds the wastes of establishments into transformation chain safely.

Full/Empty Storage

The most significant and privileged specification of facility, where all processes are managed with superior safety standards, is that all services are offered with automation systems having a fully equipped technological infrastructure.

ITT Global which is unique in Europe, offers several integrated services such as handling, heating, storage (approximately 450 – 500 empty – full container storage) to its customers with a holistic understanding of logistics service. It is possible to follow any moment of facility, with smart technology highly sensitive to environment and human health and in conformity with norms of Ministry of Environment and European environmental norms.

ITT Logistics carries out loading operations under professional conditions by using the transportation modes preferred and provided by the buyer at the specified port, on the specified date. In the location where the buyer is located, many procedures such as the preparation of the documents that they will need in the customs and duty-free area and the completion of the customs procedures are followed and completed through experienced teams and the buyer is informed that the loading has been made. Every process in import and export loads is based on the fulfilment of all responsibilities in the contract conditions made with the customer within the framework of quality and satisfaction.

ITT Logistics, which manages operations in many different parts of the world, is strong in export shipments in Bulgaria, Romania, Greece, Albania and Germany.

Import Export Loading

Tank Testing

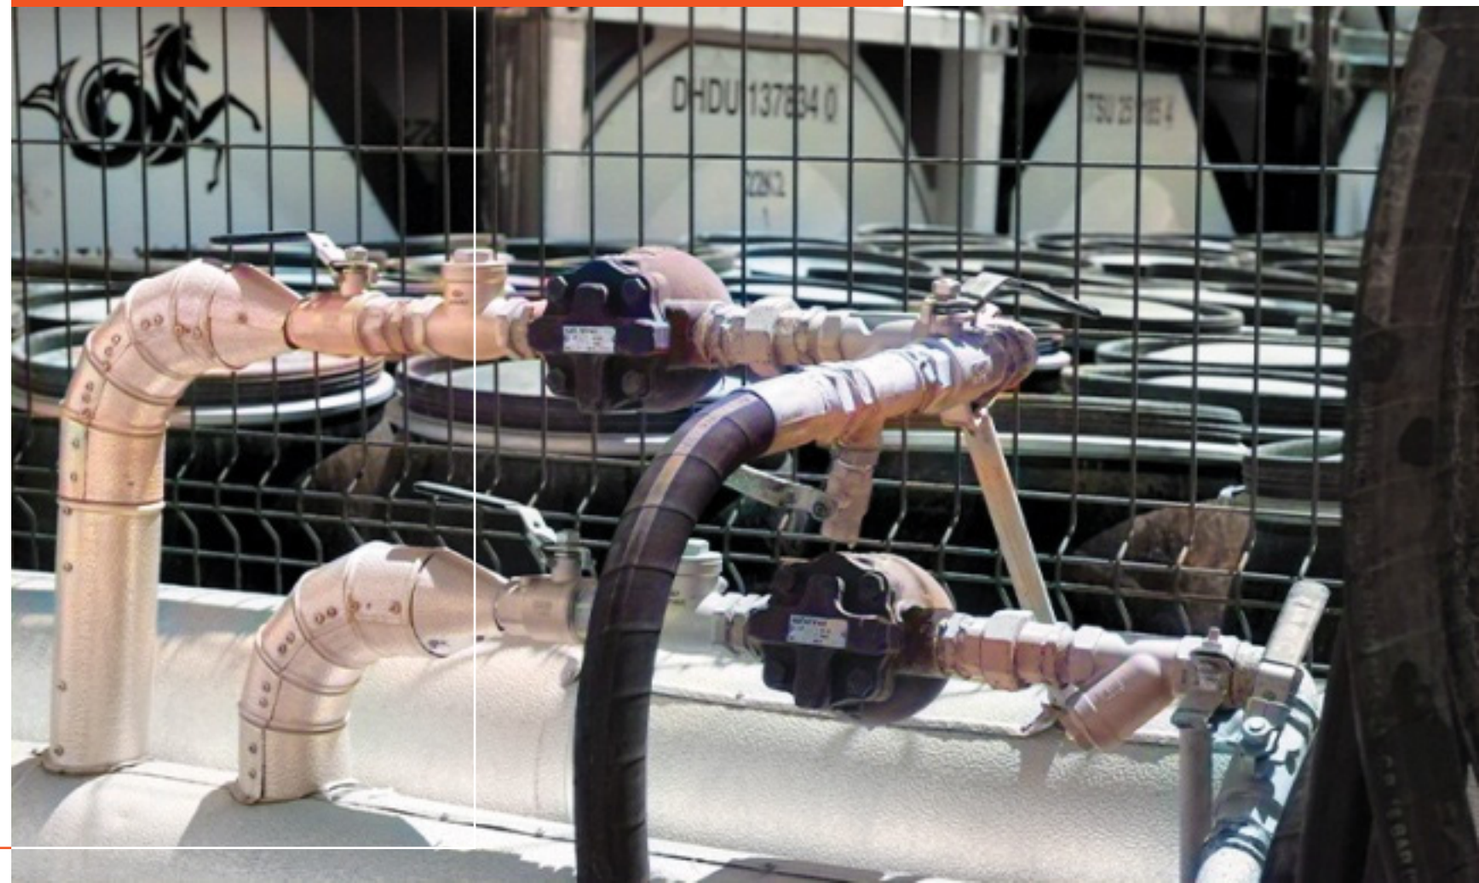

Controls of pressurised equipment must be carried out once a year according to the Health and Safety Conditions Regulation of Work Equipment.

In order for such logistics equipment to be used properly, general controls of the connection states of the tanks such as corrosion, pressure, cleaning, temperature and sealing must be done properly.

ITT Logistics is authorised to carry out tank periodic checks with its expert technicians, engineers and professional employees within the framework of occupational health and safety regulations.

With its expert ITT Logistics team with experienced, technical knowledge and skills, it provides services at international standards in order to reduce occupational accidents, carry out tank periodic checks and make occupational safety effective.

Tank periodic checks are carried out in accordance with TS EN ISO/IEC 17020 standard.

Heating Procedures

ITT Global offers the right heating method to its customers with its 3 steam and 1 hot water heating units located in its facilities to meet min/max. transportation requirement by considering the product specifications, transportation parameters and climatic conditions.

Moreover, the steam generator is used in steam heating and 30 ISO tank heating operations can be conducted simultaneously. ITT Global, which offers 7x24 heating service in case of an emergency, follows up and reports all its heating processes with integrated software and automation system instantly and thus, offers fast information flow to its customers.

Maintenance and Repair

The surveillance and examination services have importance in the logistics sector. The safety is a very significant aspect. The container repair process, which is very costly, can turn into an added value with the quality of service offered. ITT Global offers tankcontainer repair, coating, repair, maintenance and revision service in its tank repair plant located in Dilovası facility.

Periodic Tank Container Tests

WHP 2.5-year and 5-year Periodic Tank Container Tests are performed in our facility and Bureau Veritas Test certificate is given as a result of the tests.

ITT Global aims to create added value to its customers throughout entire supply chain processes and ensure its customers to be more effective and efficient in every phase of process.

For this purpose, it offers special handling services such as barreling IBC, labelling, packaging, container replacement, etc. in free and customs bonded indoor or outdoor areas in integration with other services in an effective manner.

ITT Global, which also offers filling and container replacement services along with automation systems of non-hazardous and hazardous chemicals with respect to handling service, acts with a competitive service concept providing significant convenience to its customers in export and transit trade thanks to global handling authorization obtained in the customs bonded area.

Specifically the unique service projects that we generated in line with the customer requirements, have brought ITT Global to a privileged position in the field of project logistics. ITT Global, which offers miscellaneous services including separate pallets and package supply all together, aims to accompany its customers in all processes with a service concept shaped within the direction of safe and high-quality standards.

Holistic Services

Project Logistics

The project logistics is a very complicated operational process which can cover the complicated logistics operations and duties such as featured distribution, storage or handling demanded by customer as well as transportation operations, and which can be offered depending on customer requirements and needs in addition to these services and required to be planned very carefully. Therefore, each project logistics is single and unique. In this regard, the customer requests its project to be unique and its realization in the best way within the direction of its requests. In order to fulfill these demands, the logistics establishment needs to understand and know the specifications of freight and assembly-disassembly procedures very well, cooperate with its customer and be expert in its job. In the project logistics, the operational processes cover the processes such as preparation, analysis, design, planning, implementation, conclusion and control, etc. and these processes shall be managed with expert teams through a highly sensitive safety approach. ITT Global manages all these processes with a maximum safety and minimum risk principle and displays its rooted experience in the logistics sector by producing large-scale projects.

ITT Global
in numbers

- 7500 m² large area
- 4 chemical tank and tanker washing stations
- 1 washing station dedicated solely to food washing.
- 8 IBC washing units

EFTCO

ITT Global has successfully completed all internal audits, demonstrating full compliance with quality standards and policies. This achievement reflects our commitment to continuous improvement and has qualified us to receive the necessary certifications.

ECO-Friendly

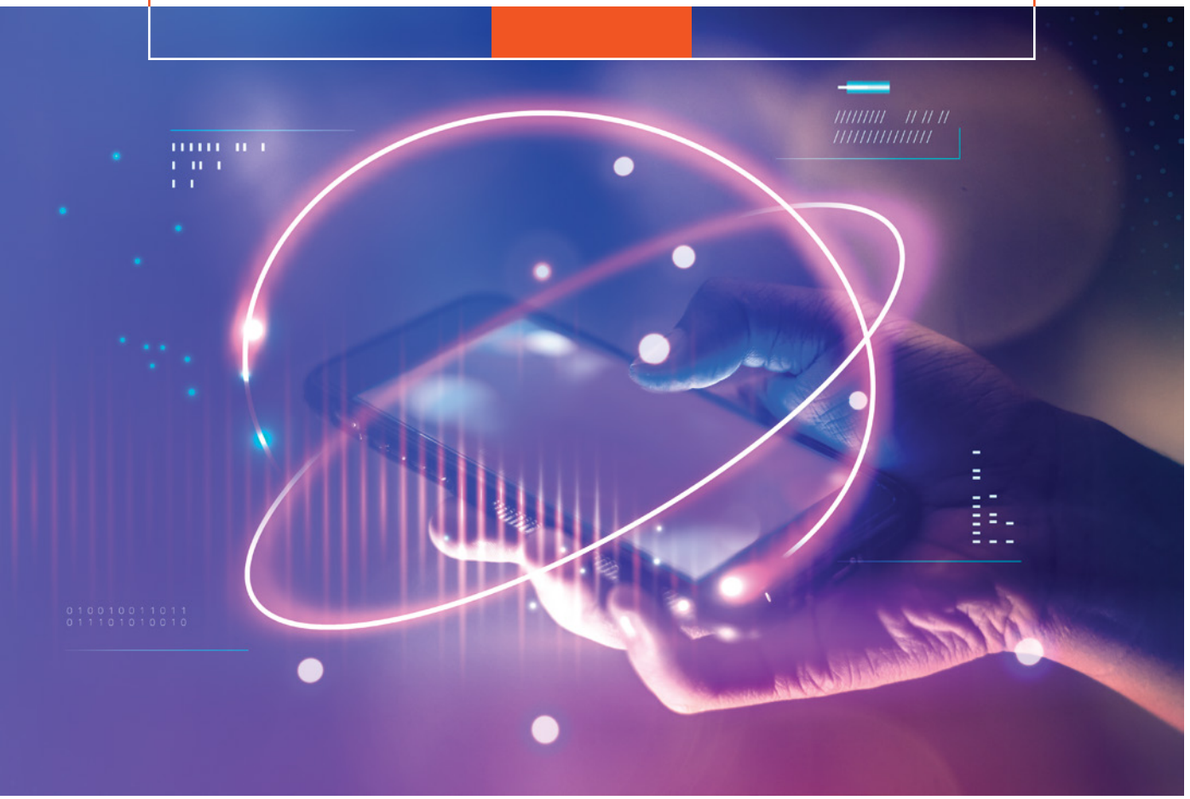

ITT Global acts without compromising on Health, Safety and Environment (HSE) factors in all its activities.

The washing channels in the plant are covered with GRP products and the same product is covered with GRP in the chemical sediment pool.

The ultraviolet sterilization system of water, which is the most important element in food washing, and the softening system, which reduces the hardness of the water to “0”, are other important features of the facility.

The facility, which is extremely sensitive about the protection of the environment, provides services in tank container washing with environmentally friendly technology with zero harm to the environment.

Technology

Today’s major developments in the field of information, technology and communication and globalization of world trade have expanded the scope and borders of competition and made offering superior and high-quality service inevitable for companies taking place in this struggle. Now, it is not enough to fulfill the customer expectations and it is required to go beyond the customer expectations. The pace of change has increased, and it becomes difficult for establishments, which are not able to keep up with the change and pace of change, to stay standing.

From this fact, ITT Global facility was structured with the target of getting maximum benefit from technological developments that it regards as a wide range covering management of establishments and hardware, software and services ensuring the improvement of procedures conducted. ITT Global where high technology hardware and software are used and all processes are operated as untouched by human hand completely with automation system, has characteristic of being the best washing facility of Europe founded with an equity capital valued at TRY 30 million.

It is possible to follow any moment of facility operated in conformity with norms of Ministry of Environment and European environmental norms.

Thank You
