OVERSEAS TRANSPORTATION

ITT Logistics offers service in the fields of Liquid Chemical, Hazardous Material and Liquid Food transportation to Europe, Russia, Turkic Republics, Balkans and Middle East from Turkey with elementary substance fleet at international standards. ITT Logistics, whose entire fleet consists of tow trucks with ADR, offers Road, Sea, Railway and Combined transportation solutions with 20 standard and 7'15-7'82 Chrome 316 L quality steel, insulated and heated ISO Tankcontainer at IMO0-IMO1-IMO' norms upon the demands of customer and product specifications, and vehicles designed according to type of substance to be transported. ITT Logistics' environmentally friendly vehicles holding ADR certificates at Euro 5- Euro 6 standards with an age average of 2 can be monitored 24 hours a day with satellite tracking system and thus, it offers the transparency of tracking your freight in every phase of transportation.

DOMESTIC TRANSPORTATION

ITT Logistics offers logistics services from every point of Turkey with its large fleet of vehicles. ITT Logistics has adopted 100% customer satisfaction as top priority principle with its staff specialized in transportation and competitive solutions.

ITT Logistics aims to deliver the customer products as free from damages with most affordable cost at desired place and time within the frame of high safety and quality standards. It provides all kinds of information concerning transportation process accurately and quickly. ITT Logistics, which offers combined services with vehicles and equipment specially designed for quality of product to be transportation, conducts project-based services at home.

FULL-EMPTY STORAGE

The outdoor storage and outdoor warehouse services are offered in ITT Sekerpınar plant which is established on a total area of 20.000 m2 in Gebze. It offers competitive services with a storage capacity of 400 containers as customs bonded area and a storage capacity of 500 containers as free zone. In ITT Logistics where all logistics processes are managed from a single point, we have flexibility of generating products which can be changed upon customer demands and needs and services specific to company within the frame of warehouse regime code. Moreover, ITT Logistics which led the way in this respect, offers container replacement and handling services at customs bonded area.

MAINTENANCE AND REPAIR

The surveillance and examination services have importance in the logistics sector. The safety is a very significant aspect. The container repair process, which is very costly, can turn into an added value with the quality of service offered. ITT Logistics offers tankcontainer repair, coating, repair, maintenance and revision service in its tank repair plant located in Sekerpınar facility.

HEATING SYSTEMS

ITT Logistics offers the right heating method to its customers with its 3 steam and 1 hot water heating units located in its facilities to meet min/max. transportation requirement by considering the product specifications, transportation parameters and climatic conditions. Moreover, the steam generator is used in steam heating and 30 ISO tank heating operations can be conducted simultaneously. ITT Logistics, which offers 7x24 heating service in case of an emergency, follows up and reports all its heating processes with integrated software and automation system instantly and thus, offers fast information flow to its customers.

TANK CLEANING

ITT Global is one of the largest investments of ITT Logistics, which was founded in the second half of 2018 and has determined its place in the sector in a short time.

Established on a 7,500 m2 land, the facility has a closed area of 1,500 m². ITT Global, Europe's largest facility unique in its capacity, offers chemical, food, IBC tank container washing, full/empty storage services at the same time. In the facility, 4 chemical tank and tanker washing platforms, 1 platform dedicated only to food washing and 8 IBC washing units can serve simultaneously.

With its service capacity, investment size and privileged features, ITT Global significantly meets the needs in the sector and increases its capacity day by day.

TANK TESTING

Controls of pressurised equipment must be carried out once a year according to the Health and Safety Conditions Regulation of Work Equipment.

In order for such logistics equipment to be used properly, general controls of the connection states of the tanks such as corrosion, pressure, cleaning, temperature and sealing must be done properly.

ITT Logistics is authorised to carry out tank periodic checks with its expert technicians, engineers and professional employees within the framework of occupational health and safety regulations.

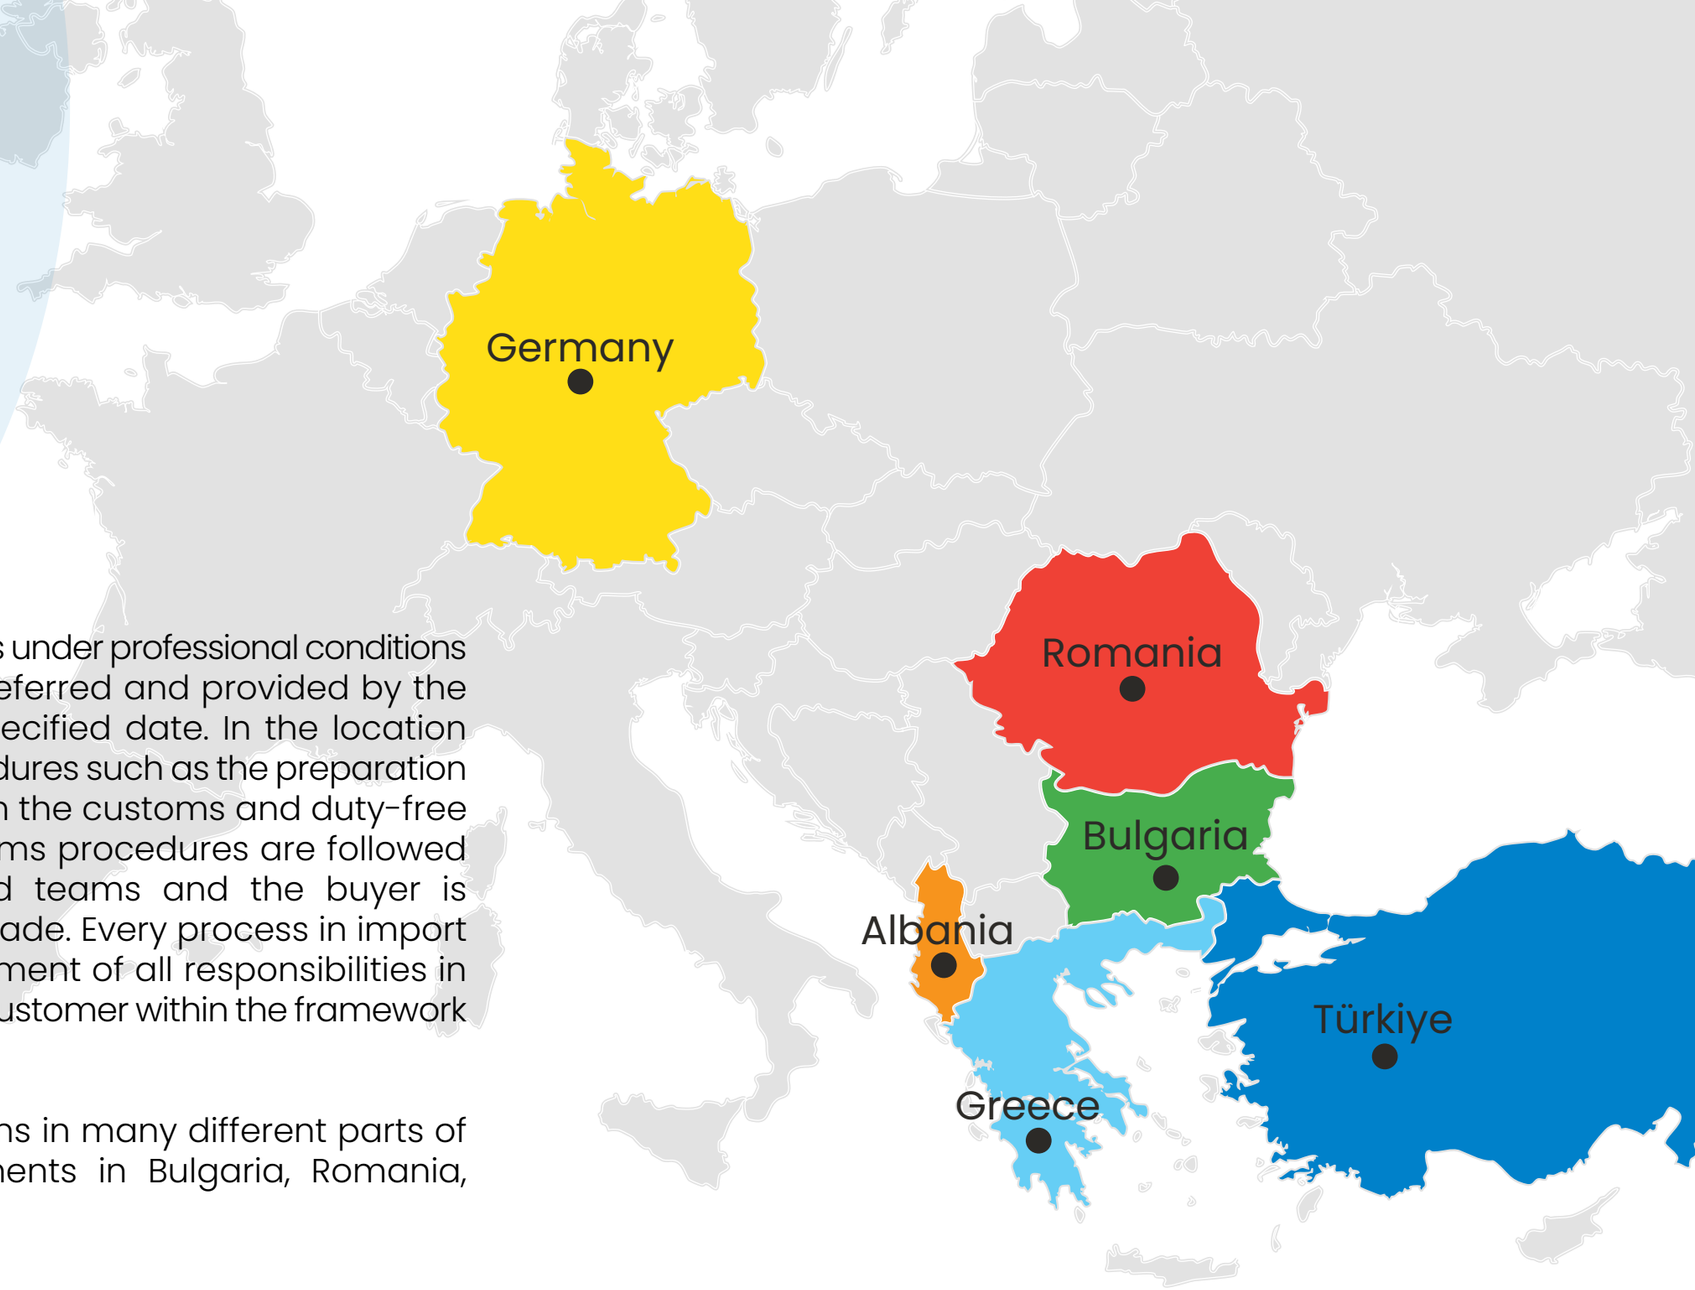

With its expert ITT Logistics team with experienced, technical knowledge and skills, it provides services at international standards in order to reduce occupational accidents, carry out tank periodic checks and make occupational safety effective.

Tank periodic checks are carried out in accordance with TS EN ISO/IEC 17020 standard.

IMPORT AND EXPORT LOADING

ITT Logistics carries out loading operations under professional conditions by using the transportation modes preferred and provided by the buyer at the specified port, on the specified date. In the location where the buyer is located, many procedures such as the preparation of the documents that they will need in the customs and duty-free area and the completion of the customs procedures are followed and completed through experienced teams and the buyer is informed that the loading has been made. Every process in import and export loads is based on the fulfilment of all responsibilities in the contract conditions made with the customer within the framework of quality and satisfaction.

ITT Logistics, which manages operations in many different parts of the world, is strong in export shipments in Bulgaria, Romania, Greece, Albania and Germany.

HOLISTIC SERVICES

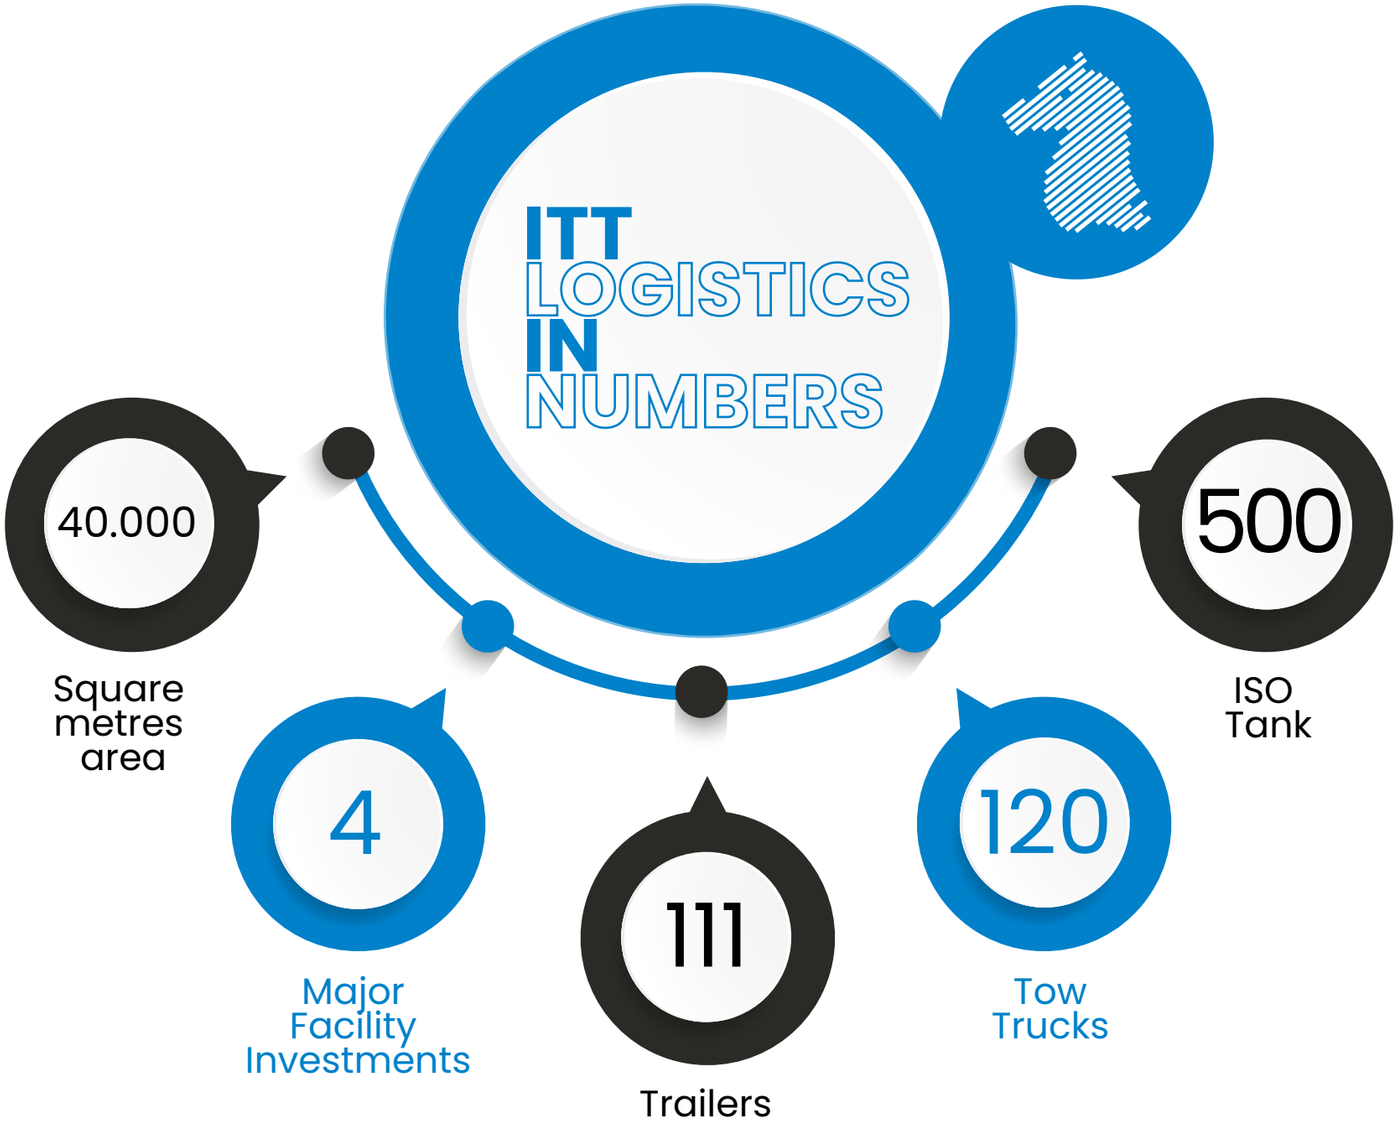

ITT Logistics aims to create added value to its customers throughout entire supply chain processes and ensure its customers to be more effective and efficient in every phase of process.

For this purpose, it offers special handling services such as barreling IBC, labelling, packaging, container replacement, etc. in free and customs bonded indoor or outdoor areas in integration with other services in an effective manner.

ITT Logistics, which also offers filling and container replacement services along with automation systems of non-hazardous and hazardous chemicals with respect to handling service, acts with a competitive service concept providing significant convenience to its customers in export and transit trade thanks to global handling authorization obtained in the customs bonded area.

Specifically the unique service projects we generated in line with the customer requirements have brought ITT Logistics to a privileged position in the field of project logistics. ITT Logistics which offers miscellaneous services including separate pallets and package supply all together, aims to accompany its customers in all processes with a service concept shaped within the direction of safe and high-quality standards.

INVESTMENTS

ITT Global is one of the largest investments of ITT Logistics, which was founded in the second half of 2018 and has determined its place in the sector in a short time.

Established on a 7,500 m2 land, the facility has a closed area of 1,500 m². ITT Global, Europe's largest facility unique in its capacity, offers chemical, food, IBC tank container washing, full/empty storage services at the same time. In the facility, 4 chemical tank and tanker washing platforms, 1 platform dedicated only to food washing and 8 IBC washing units can serve simultaneously.

With its service capacity, investment size and privileged features, ITT Global significantly meets the needs in the sector and increases its capacity day by day.

EUROPE'S BEST TANK CLEANING STATION

ITT PORT

ITT Logistics has taken important steps to invest in ITT Port, which will operate in the field of port services in the first quarter of 2023. ITT Port will deal with port services that are vital for the growth of international trade, contribute to making the logistics industry more competitive and help cross-border trade to be carried out more easily and reliably.

With its experienced and dynamic structure, ITT Port will be able to act in accordance with current trends in all the services it provides. With its technological and digital infrastructure, innovative business structure and wide range of services, it will be able to meet customer demands from the port to the buyer in a holistic manner.

ITT Port will stand out with its large-scale projects aiming to increase efficiency in port and related logistics services, ensure maximum safety in business processes and implement high quality and environmental standards.

INNOVATION IN MOTION

ITT LOGISTICS | **WAREHOUSE**

ITT Logistics realised the ITT Logistics Warehouse investment in 2018 in order to meet the demand arising for the storage of products with commercial value. Today, warehouse management is an important part of logistics services as a set of business processes that require professional management. It covers the process of receiving products or cargo from a certain point and preparing them to be sent to the desired points after being stored for a certain period of time.

In addition, it is possible to perform operations such as loading, unloading, planning, receiving, container change, counting, inventory tracking, addressing, placement, packaging, preparation, dispatch and return process management. ITT Logistics Warehouse is primarily preferred by many sectors such as finished goods manufacturers, commercial enterprises, import and export companies, wholesalers, transport companies due to its strategic location.

STRATEGIC WAREHOUSING SMOOTH OPERATIONS

ITT LOGISTICS | **PARKOUR**

ITT Logistics has made a new investment under the name of "ITT Logistics Parkour" due to the increase in its business volume and the growth of its fleet capacity. The facility, which was created considering that time management is of great importance in the logistics sector, will meet an important need of the sector by facilitating operational management with its ability to meet fast demand.

Parkour will be used as the starting point of operations, where ITT Logistics will position its trucks, trailers and other operation vehicles. In this way, all kinds of vehicles in the fleet will be quickly included in the operation when needed, providing more effective time and service management. The facility aims to improve service processes, increase operational efficiency and perform in line with ITT Logistics' existing investment and service networks.
